AI-Powered Small Business Marketplace — Egypt
Arabic (RTL) & English (LTR) · ASP.NET Core MVC

Version	2.3 — Seller earnings hold period & admin settlement
Based on	SRS v2.1 + v2.2 (product approval). Other rules unchanged unless below.
Change	Held → Available after N days; Admin marks Settled (no auto payout)

This version defines when seller money becomes available after delivery/completion, and how an administrator records settlement. **Automated bank payouts remain out of MVP.**

1. Goal

After a seller order is completed, earnings stay on hold for a configurable number of days (dispute / safety window). After that window, the balance becomes available. The seller cannot receive settlement before the hold ends. The administrator marks settlement when paid offline.

2. Core financial flow

Seller order **Completed** → create/update earning line (net amount) with status **Held** → after hold period → status **Available** → Admin marks **Settled** (manual).

2.1 Earning line statuses

Status	Meaning
Held	Inside hold window after Completed. Refunds may still reduce amount.
Available	Hold period ended. Eligible for admin settlement. Seller can see it as withdrawable in UI terms, but payout is not automatic.
Settled	Admin recorded offline payment / settlement. Read-only afterward except audit notes.

2.2 Hold period rules

- Hold starts when the **seller order** reaches **Completed** (typically after delivery success per existing status model).
- Duration: administrator-configurable integer days; **default 14 days**.
- A background job (or scheduled service) moves **Held** → **Available** when **CompletedAt + HoldDays** ≤ **now**.
- Job must be idempotent (do not double-move or double-pay).
- Cancelled or never-completed seller orders create **no** positive earning to settle.

2.3 Amount (unchanged formula)

Net for a seller order = product subtotal + delivery fee – commission – refunds allocated to that seller order (same basis as SRS v2.1 Core Rules 3.3). Currency EGP. decimal(18,2). Application C# only — never AI.

During **Held** (and before Settled): eligible refunds reduce the remaining amount. Settlement amount must never exceed remaining eligible net.

2.4 What is still out of MVP

- Automated bank transfer, wallet cash-out, or payment-provider split payouts.
- Seller self-service “Withdraw now” that moves real money without admin.
- Full post-delivery RMA / return-shipping workflow (still out of scope); hold is a **money hold only**.

3. Who can do what

Action	Seller	Admin
View own Held / Available / Settled	Yes (own only)	—
View all sellers’ earnings	No	Yes
Configure hold days	No	Yes
Mark Available → Settled	No	Yes (+ optional reference/note)
Adjust for dispute/refund (audit)	No	Yes, per refund/dispute rules

4. Functional requirements updates

FR-14 / earnings (extend)

- System records seller net earnings when seller order is Completed, status Held.
- After configured hold days, status becomes Available.
- Seller views own earnings by status; Admin views all and filters by seller/status/date.
- Admin marks one or more Available lines (or a settlement batch) as Settled with timestamp, admin id, optional payment reference.
- Audit log every settlement and any amount adjustment.

FR-13 Notifications (add)

- Optional: notify seller when earnings become Available.
- Optional: notify seller when Admin marks Settled.

5. Admin configuration (add)

- Seller earnings hold days (integer, default 14). Stored in system settings with commission rate and delivery fees.

6. Acceptance criteria (new)

- **A28.** When a seller order becomes Completed, an earning line exists with status Held and correct net amount.
- **A29.** After hold days pass, the line becomes Available automatically (idempotent job).
- **A30.** Seller cannot see money as Settled until admin marks settlement.
- **A31.** Admin can mark Available earnings Settled; action is audited.
- **A32.** Refund on a Held (or not-yet-Settled) earning reduces remaining eligible amount; settled amount never exceeds remaining net.
- **A33.** No automated external payout is required for MVP acceptance.

7. Use cases to add

- Seller: **View my earnings** (Held / Available / Settled).
- Admin: **View earnings & commission reports**.
- Admin: **Mark seller settlement (Settled)**.
- System: **Release held earnings after hold period** (background).

8. Data model note

- Entity e.g. SellerEarning or settlement lines linked to SellerOrderId.

- Fields: Amount, Status (Held|Available|Settled), AvailableAt, SettledAt, SettledByAdminId, PaymentReference (optional).
- SystemSetting: EarningsHoldDays (default 14).

9. Phase guidance

Implement with orders/finance (Phase 4–6): calculate on Complete; hold job; seller/admin views; admin settle action. Do not build bank APIs in MVP.
